

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

III. *A Letter from Mr. Jac. Theod. Klein, Secret. Dan. & F. R. S. to Sir Hans Sloane Bart. Pr. R. S. &c. serving to accompany the Pictures of a very extraordinary foffile Skull of an Ox with the Cores of the Horns; of the Plica Polonica mentioned in Tranfact. N^o 417; and of a very large Tumor of the Eye. Translated from the Latin by T. S. M. D.*

S I R,

A Friend from the City of *Dirſchaw* has lately placed in my Collection part of the Skull of an Ox with the Cores of the Horns, which in all Probability muſt have been terrible. It was dug up near the ſaid City, which is three Miles diſtant from hence. I beg leave to ſend you ſome Draughts thereof. Fig. I, represents the outſide to the Orbits of the Eyes. Fig. II, the Baſis of the Skull, and Fig. III, the *Occiput*. The Cores of the Horns contain deep longitudinal Furrows; they are not entire at the Extremities, and yet are diſtant from one another.

Fig. I. *a b.* 3 Feet 2 $\frac{1}{2}$ Inches.
c d. 1 Foot 1 $\frac{1}{3}$ Inch.
e f. 1 Foot 4 Inches.
g h. 1 Foot 1 $\frac{3}{4}$ Inch.

ſ K.

i K. The Root of the Horns 1 Foot 6 Inches in Circumference.

1 m. The Cores 11 Inches in a strait Line.

I dare not determine to what kind of Bulls this Fossil is to be ascribed. I only conjecture it may belong to the *Taurolephantes*, of which you have made mention, in your learned Dissertation, of a Pair of very extraordinary large Horns, published in Vol. 34 of *Philosoph. Transact.* N° 397. For as to the *Zubrones* which *Gejner* on the *Urus*, pag. 144, mentions from *Munsterus*, there is no sufficient Proof that the Animal in question was of that Kind.

To this I make bold to add two other Draughts: The one is that of a stupendous *Plica Polonica*, which Dr. *Floercke*, Physician to the Princess of *Radzivil*, got drawn. The *Plica* itself was sent to *Dresden*, where I saw it. It is remarkable, that the Woman affected with this *Plica*, who was a Subject of the Princess, and liv'd in the District of *Novogrod*, during 52 Years that she laboured under it, never changed her Resting-Place but twice a Year, viz. in Spring and Winter. Upon the Approach of Winter she could endure Cold so very well, that she shunned all Sort of Heat, even that of a lighted Candle. She never used any strong Liquor, but lived on very bad Bread, raw Herbs, and Water, to seventy Years of Age. In the Spring she used to be carried to some Place where the Heat could not easily penetrate. She at length died, near two Years ago. [*Vid. Transact.* N° 417.]

The other Draught is of a prodigious Swelling of the Eye of a Subject of the aforesaid Princess. This Swelling was occasioned by Hail; and it daily encreases and grows hard, except at the Place marked by the Letter *a*, Fig. 5. This Circumstance is very singular, that the Optic Nerve and the Tunicles have stretched so much, that the Eye quitted its Socket, and fell down to the Beard, Letter *b*. The unhappy Man is still living, and can move this Eye, which weeps, but, as is no Wonder, cannot see with it. The Tumour is not painful, but it is very troublesome to him about his Nose. If these few Curiosities be acceptable to such inquisitive Philosophers, as the Gentlemen of the *Royal Society* are, I have my Wish. I am, &c.

Dantzick, July 4, 1730.

IV. *An Abstract by James Douglas, M. D. Med. Regin. & F. R. S. of a Book, entituled, A short Account of MORTIFICATIONS, and of the Surprising Effect of the BARK, in putting a Stop to their Progress, &c. By John Douglas, Surgeon, F. R. S. London, Printed for John Nurse, at the Lamb without Temple-Bar. 1732.*

THIS short Account of *Mortifications*, &c. which contains Forty-eight Pages in a large Octavo, is dedicated to *Ambrose Dickins* and
